

## Ethernet/WiFi IP Communicator, 1068

1068/013

### Product specifications:

- The connection to the Internet network is made via the Ethernet or WiFi interfaces integrated in the device.
- Absorbed current: 60 mA
- Ethernet baud rate: 10Mbps
- WiFi baud rate: 54Mbps

## Description

The IP interface is an optional module that provides IP/WiFi connectivity to control units 1068. It allows the integration with a LAN network and thus remote management of alarm systems via APP on smartphones or tablets.

The interface is directly connected to the control unit board by means of the connector and directly communicates with the host control unit by means of a dedicated serial connection.
