

2Voice activation card, Ipassan

1088/401

- not applicable

Description

The 2Voice Activation card allows you to integrate the 2Voice system with Ipassan if lifts are present. The benefits are:

- Event reports (call in progress, door opening, etc.) are stored in the Ipassan control unit
- The door opening is managed by the Ipassan control unit, guaranteeing greater security
- Simplified wiring between control unit and 2Voice pushbutton panel
- Optional visitor access to the authorised lift/floor only
- Greater flexibility: possibility of opening 4 doors or managing 4 different services for each 2Voice pushbutton panel and for each internal position, for example: door opening with light switch-on
- Management of additional services without using 2Voice 1083/54 special decoding

The 2Voice pushbutton panels are integrated with the Ipassan control unit through the 1083/83 interface

The 2Voice activation card should be used when lift integration control is required. A card is required for each Ipassan control unit that operates the lift.
