

Ipercom activation card, Ipassan

1088/402

- not applicable

Description

The Ipercom activation card allows you to integrate the Ipercom system with the Ipassan control unit. The benefits are:

- Event reports (call in progress, door opening, etc.) are stored in the Ipassan control unit
- Door opening is managed by the Ipassan control unit, guaranteeing greater security
- Simplified TCP/IP wiring
- Optional visitor access to the authorised lift/floor only
- Greater flexibility: possibility of opening 4 doors or managing 4 different services for each Ipercom pushbutton panel and for each internal position, for example: door opening with light switch-on

The activation card should be used when managing lift integration and defining floor access authorisation.
