

USB interface for Agorà2 PABX configuration from PC using system software

1372/50

Description

Optional USB/RS232 interface card to be inserted inside an Agorà 2 Pabx. It allows you to configure, update the Agorà2 PBX and extract the call data, by connecting to a local PC, equipped with the Scaiterm2Net application present in the CD supplied with the pabx base. The board comes complete with a USB cable.
