Description

IPerTalk is a full-IP communication system capable of managing the typical telephone functions of a PABX and integrating them with new ways of communication (video calls, e-mails, text messages, CTI, management systems).

IPerTalk is an extremely modular software platform that can be expanded both in terms of resources and multimedia functionalities, allowing the user to manage different operating tools via a single service centre. IPerTalk is the ideal solution for those who wish to use different communication resources and integrate them.

Bundle item no. 1375/14A is the solution for IP video door phone services for the service sector, either in stand-alone mode or integrated with third-party VoIP PBXs, in particular offices and commercial businesses within a residential building in which the iPerCom video door phone system is installed. IP telephone system equipped for management of 1 VoIP Provider line and can support up to 20 lines and 20 extensions, by means of additional licences. The system is provided also with the following features: customisable advanced autoresponder, voicemail for each user (with access to messages via e-mail, user web interface and extension), web interface for each user (to customise the extension and access to the additional functions), private and shared directory, administration interface.
