Description

U.TALK PRO (1375/806) is a mid-range standard SIP telephone of the Urmet's VoIP range, that allows to manage calls and telephone operations with the utmost simplicity: the choice for those who need a simplified use of the telephone but with the ability to access all the functions of the iPerTALK system in a simple and guided way, thanks to the color display with context-sensitive function keys. The elegant aesthetics, enriched by fine details such as the color display, the ease of accessing system functions and use, make it suitable for any type of user and use.

It is a multi-line telephone that allows you to manage multiple extensions (up to 6), to manage

different services with the same terminal, such as answering different types of calls, door units, intercom function to other system extensions or systems sound diffusion, etc.

The terminal does not require any activity during installation on the iPerTAlk system, thanks to the automatic acquisition and configuration of both the system settings and the centralized directory.
