- Ringer customisation: YES (internal, external and door phone)
- Ringer volume adjustment: YES
- Call volume adjustment: YES
- Multi-language support: YES
- Colour: black
- Network ports: 2x RJ45 10/100M
- Power supply via PoE IEEE802.3af or optional external power supply unit (item no. 1375/809)
- Tabletop/wall-mounting installation: YES (wall mounting requires accessory 1375/808)
- Dimensions (LxHxD - mm):
- * tabletop (position 1): 214x188.6x181.1 mm
- *tabletop (position 2): 214x180.5x190.1 mm
- * wall-mounted: 214x119.4x219.1 mm

241,45 Euro (VAT excluded)

Description

U.TALK CL Digit (1375/812A) is the SIP-standard telephone in Urmet's high-end VoIP range that allows calls and telephone operations to be managed with maximum efficiency: the ideal choice for those who make intensive use of the telephone, such as a switchboard operator, thanks to its large display, 6-key digital display lamp field (paging up to 30 entries) that allows lamp field management for lines and extensions, the definition of quick functions and the storage of useful numbers.

The elegant design style, enhanced by fine details such as the colour display, the high customisation of its functions and modes of use, and the possibility of connecting headsets, both wired and via Bluetooth, make it suitable for the most demanding users.

It is a multi-line telephone that allows managing several extensions (up to 12) to handle different services with the same terminal, such as answering different types of calls, outdoor stations, intercom function towards other system extensions or audio systems, etc.

The terminal requires no activity during installation on the iPerTALK system, thanks to the automatic acquisition and configuration of both the system settings and the centralised directory.
